Cloudelligent Customer Onboarding Guide (Old WAFR & FinOps)

Customer Facing (On Call):

Prerequisite

1. Ensure you are logged in to your AWS **Management account**.
2. To confirm, navigate to **AWS Organizations** from the top-right dropdown — if it shows your account as the **Management account**, you are in the right place. If **AWS Organizations** is disabled or unavailable, you are on a single account and can proceed.
3. Ensure you are logged in with **Administrator Access (with Billing Access)** or **Root User Access**.

AWS Organizations

*Follow this section only if you have **more than one** AWS account.*

4. Navigate to **AWS Organizations**.
5. Go to the **Accounts** list and note down the total number of member accounts in your organization.
6. Navigate to the **Services** tab within AWS Organizations, search for **CloudFormation StackSets**, and enable it.

Billing and Cost Management

7. Navigate to **Billing and Cost Management** and select **Data Exports** under Cost and Usage Analysis.
8. Click **Create Report**, select the **Legacy CUR Report** option, and configure the following:
    - Export name: corestack
    - Check **Include resource IDs**
    - Check **Refresh automatically**
    - Select **Daily** in Report data time granularity
9. Configure an S3 bucket named: **corestack-cur-<your-company-name>**
10. Select the region where most of your workload exists. If you are unsure, navigate to **Cost Explorer**, go to **Dimension** settings, choose **Region**, and note the topmost one.

11. Set the S3 path prefix to: corestack
12. Click **Create Report**.

AWS CloudFormation

13. Navigate to **CloudFormation** and create a new stack (standard). In the Amazon S3 URL, enter this link: https://cloudelligent-onboarding-templates.s3.us-east-1.amazonaws.com/Cloudelligent_WAFR_Template.yml and proceed to next page.

    Alternatively, choose **Upload a template file** option in **Specify template** section, and upload this file: https://github.com/CLDNT/cloudelligent-onboarding-stack/blob/main/Corestack_FinOps_read_access.yml after downloading, and proceed to next page.

14. Set the following values:
    - **Stack Name:** cloudelligent-assessment-role
    - **AWSCostAndUsageReportCURBucketName:** *(the S3 bucket name you created in Step 9)*
15. Click **Next**, scroll to the bottom, acknowledge the **IAM resources** checkbox, click **Next** again, and click **Submit**.
16. Wait for the stack to complete and confirm its status shows **Succeeded**.

AWS CloudFormation — Multiple Member Accounts (StackSets)

*Follow this section only if you have **more than one** AWS account.*

17. Navigate to **CloudFormation** and create a new **StackSet** from the StackSet menu. In the Amazon S3 URL, enter this link: https://cloudelligent-onboarding-templates.s3.us-east-1.amazonaws.com/Cloudelligent_WAFR_Template.yml and proceed to next page.

    Alternatively, choose **Upload a template file** option in **Specify template** section, and upload this file: https://github.com/CLDNT/cloudelligent-onboarding-stack/blob/main/Corestack_FinOps_read_access.yml after downloading, and proceed to next page.

18. Set the following values:
    - **StackSet Name:** cloudelligent-assessment-role
    - **AWSCostAndUsageReportCURBucketName:** *(the S3 bucket name you created in Step 9)*
19. Acknowledge the **IAM resources** checkbox.
20. Under **Specify Regions**, select the region identified in Step 10.

21. In **Maximum concurrent accounts** and **Failure tolerance** options, enter the total number of member accounts noted in Step 5, then click **Create StackSet**.
22. Confirm that all stack instances show the status of **Succeeded**.

Support Ticket

23. Navigate to **Support Center** by searching "Support" in the search bar
24. Paste the following content in the textbox in the **Support interactions** section and hit send from the paper plane icon in the bottom right:

    We request to backfill our costs data on a recently created CUR bucket named "Corestack", bucket name corestack-cur-<your-company-name>, under our AWS Management Account – <your-management-account-id>. (Backfill up to 90 days).

25. Click **Create a Case**.
26. **Subject:** Data Export Backfill 90 Days
27. Select the following options:
    - **Type:** Account and Billing
    - **Service:** Billing
    - **Category:** Consolidated Billing
    - **Severity:** General question
    - **Communication preference:** Web

    Then click **Next Step**.

28. Click **Submit**.

Final Step — Share Outputs

27. Navigate to **CloudFormation** and select the stack created in Step 13. Open the **Outputs** tab and share the following values with us:
    - **External ID**
    - **Role ARN**
    - **S3 Bucket Name** *(from Step 9)*

Tools Onboarding (Off Call):

CoreStack:

Login and Tenant Selection

1. Log in to CoreStack at https://msprod.corestack.io/auth/login
2. Select **Cloudelligent** from the **Tenants** dropdown on the top right of the page.

Create the Tenant

3. Open the left side panel, scroll down, click **Settings**, then choose **Tenant Management**.
4. On the **Tenant Management** page, click the **plus (+) icon** at the center of the screen, just above the tenant list.
5. On the **Create Tenant** page, enter the **Tenant Name**, check the box confirming **I understand why my details are required. I have read your Privacy Policy**, then click **Create Tenant**.

Onboard the Management Account

6. From the side panel, navigate to **Governance → Account Governance → Cloud Accounts**.
7. Click the **Onboard Now** button on the top right.
8. Select **AWS** as the cloud provider by clicking **Onboard** on hover.
9. Choose **AWS Management Account**. Leave **AWS Cloud Account Type** as the default **Standard**. Click **Next**.
10. Under **Prerequisites**, choose **Read-Only** for access type, check **Select All** under **Select Product(s)**, then click **Next**.
11. For **Select Authentication Protocol**, choose **Assume Role**. Under **Assume Role Credentials**, paste the **Role ARN** and **External ID** gathered during the onboarding call. Leave **MFA Enabled** as **False**. Click **Save & Validate**, then click **Next**.
12. On the **Basic Settings** page, enter the **Account Name**. Under **Cost Report Access Type → S3 Bucket**, paste the **CUR bucket name** gathered from the onboarding call. Click **Save & Validate**, check **Privacy Policy**, then click **Next**.
13. On the **Advanced Settings** page, confirm **Select Region(s)** is set to **All Regions**, then click **Finish**.

Onboard Member Accounts (if the client has multiple accounts)

14. Wait a couple of hours for the member accounts to appear.
15. Navigate back to **Governance → Account Governance → Cloud Accounts** and select **AWS Member Accounts** at the center of the screen. The listed member accounts appear at the bottom of the page. Click the **Onboard** button in the member account row.
16. Choose **Read-Only** for access type, check **Select All** under **Select Product(s)**, then click **Next**.

17. For **Select Authentication Protocol**, choose **Assume Role**. Under **Assume Role Credentials**, paste the **Role ARN** and **External ID** for that specific member account. Leave **MFA Enabled** as **False**. Click **Save & Validate**, then click **Next**.
18. On the **Basic Settings** page, enter a suitable **Account Name**. For **Cost Report Access Type**, choose **AWS Management Account**, then check **Privacy Policy** and click **Next**.
19. On the **Advanced Settings** page, set **Select Region(s)** to **All Regions**, then click **Finish**.
20. Repeat steps 15 through 19 for each remaining member account.

Create a Workload Assessment (WAFR)

21. Wait a couple of hours for the member account states to update, then identify the account(s) that require a WAFR assessment.
22. From the left side panel, navigate to **CloudOps → Cloud Inventory → Workloads**.
23. On the **Workloads** page, click **Create Workload** on the top right. Enter a suitable **Workload Name**, **Workload Type**, and **Tier Name**. For **Cloud Provider**, choose **AWS**. For **Cloud Account(s)**, select the account that requires the assessment (you can select multiple accounts to produce a single consolidated report). Click **Load Resources**, then click **Create Workload**.
24. Back on the **Workloads** page, find your workload in the list and click **Create** under the **Assessment** column. In the **Create Assessment** panel that opens on the right, enter the **Assessment Name**, select the **Assessment Approver**, choose the **Workload** created in the previous step, and select **AWS Well-Architected Framework** from the **Framework(s)** dropdown. Check **Sync Workload to AWS Well-Architected Tool**, then click **Save & Run** at the bottom of the panel to create the assessment.

Run the Assessment

25. From the left side panel, navigate to **Assessments → Workload Assessments**. The assessment created in the previous step appears here. Wait for the **Active Assessment** scan status to change to **Completed**.
26. (Optional but recommended) To complete the WAFR properly, click **View** and answer the questions across all six pillars.

Generate the Report

27. From the left side panel, navigate to **Assessments → Reports**. Select **Workload Assessment Detailed Report**, either by clicking **View Report** under the **Action** column or by clicking the report name directly.

28. At the top of the report, under the heading, there are three blue dropdown buttons. Working left to right: open the first and choose the **Workload** created earlier, open the second and choose the **Assessment** created earlier, and open the third and set the **Framework** to **AWS Well-Architected Framework**. Once all three are set, click the **Download** button on the right.
29. From the left side panel, navigate to **Assessments → Reports** and click **Generated Reports** at the top. Wait for the detailed report to become available, then click the **download icon** on the right (under the **Report File** column) to download the **Workload Assessment Detailed Report** for the client.

Archera:

1. Navigate to **Cloudelligent** tenant in Archera, by hovering over the profile icon in the top left corner and clicking **Switch Organization**.
2. On the same hovering menu (in Cloudelligent tenant), choose **Partner Portal**.
3. Click the **Add Account** in the top right corner and write the company name under **Organization Name** and click **Submit.**
4. Refresh the page and navigate to the newly created tenant from the **Switch Organization** menu.
5. Choose AWS Onboarding.
6. Enter the management account ID (the account where we deployed CF Stack in Step 13 of On Call Stage).
7. Select **AWS Cloudformation** for Install Type
8. Click the **Verify your Archera Installation** button, upon successful validation click **Continue**.
9. Click **Continue** once again on the **AWS Cost Explorer** section
10. Click **Generate CUR** button on the **Cost Usage Report (CUR)** section
11. Validate successful onboarding after 24 hours, by going to **Cost Explorer** in the NavBar and confirm cost data is populated

Cloudviz:

1. Navigate to **Settings** from the top right corner and select **Manage AWS Accounts** from the NavBar
2. Click **Add AWS Account** and add the following:
    - AWS Account name: <Company Name> (Additionally account identifier if onboarding multiple accounts from an AWS Organization)
    - IAM Role ARN: arn:aws:iam::<account-id>:role/cloudelligent-assessment-role
    - Update **Not shared with whole team** to **Shared with whole team**

3. Click **Save AWS Account**
4. Navigate to **Diagram**, choose the account that was added and choose the region with the most workload and click **Generate.**
5. Validate diagram by confirm any given resource e.g. S3 bucket named **corestack-cur-<company-name>**
